

GMax Data Access for Migration.

There are 2 versions of GMax based on Microsoft Access and SQL database engines.

Both can be accessed from the GMax Database Exporter a zipped version can be downloaded from <http://www.morph-tech.net/gmax/install/GDE.zip> this needs to be extracted into the existing GMax program folder. The default one being C:\Program Files (x86)\Max\Programs

User name Admin password LetMeIn

On accessing the data the primary tables are

tblCustomer – Contains Customer details

tblSupplier – Contains Supplier details

tblAddresses – Contains all addresses for Customers\Suppliers accounts and CASH\Alternative where used in the tblDocHeader table

tblParts – Contains all parts used on the system excluding free text

tblStock – Contains the stock levels and last sold date

tblDocHeader – Main file containing all Documents details within the system

tblDocParts - Linked to the tblDocHeader containing Document parts

tblDocLabour - Linked to the tblDocHeader table containing all Document Labour details

tblPostings – Contains all the transactions with the account's ledgers

But all other tables are available from the pull down box.

Data query's can be built or the default select statements can be used to populate the grid.

To export to CSV click on Query \ Export data and select the file name and location you wish the data to be saved to.
